1. Go to https://calendar.google.com/
2. In the left-hand corner, you'll see your list of calendars under "My calendars." **

3. **Hover over** the calendar you want to use and click the **three dots** ($...$) that appear on the right side

4. Click **"Settings and Sharing,"** then scroll down until you see **"Secret address in iCal format"** and copy it.

PS. Do not share this address with anyone. The widget app will **not** save this address to any external databases; it will only be saved on your **device**, and only you will have access to it.
